Beauty Is Skin Deep

David N. Menton, Ph.D
I would like to personally thank you for watching the Origins program. Origins was a special program, near to the heart of my late husband, Russell Bixler.

I trust that the information in this presentation will be helpful in your study of creation science. Thank you for your prayerful and financial support of Origins... you’re making the television production of this program possible.

-Norma Bixler

Our Hairs Are Numbered

“Are not two sparrows sold for a penny? Yet not one of them will fall to the ground apart from the will of your Father. And even the very hairs of your head are all numbered. So don’t be afraid; you are worth more than many sparrows.”

(Matthew 10:29-31)
In 1979, the Voyager space probe filmed a volcano erupting on Io, one of Jupiter's moons. This discovery amazed the NASA scientists who believe in the evolutionary concept that the solar system is billions of years old.

Small bodies like this moon should have cooled off long ago. The fact that Io still has volcanic activity when it is supposedly almost 5 billion years old has no adequate explanation.

Perhaps Io is still hot because it is not very old!
