DRAGONS or DINOSAURS?
PART 1
By: Darek Isaacs
I would like to personally thank you for watching the Origins program. Origins was a special program, near to the heart of my late husband, Russell Bixler.

I trust that the information in this presentation will be helpful in your study of creation science. Thank you for your prayerful and financial support of Origins... you’re making the television production of this program possible.

"co-occurrence of men and dinosaurs. Such an association would dispel an Earth with vast antiquity. The entire history of creation, including the day of rest, could be accommodated in the seven biblical days of the Genesis myth. Evolution would be vanquished."

Dinosaur Historicity
Mythology
“The most general description of the Occidental Dragon is very similar to that of the Oriental Dragon, being an enormous, elongated, scale-covered body like that of a crocodile, often with vast wings like those of a bat, and having huge legs like those of a lizard with long claws. It may have a toothed dorsal ridge extending to a long serpentine tail, usually barbed. Its head may be like that of a vast lizard or crocodile but with either a crest or horns on the head…”

“Those dragons were a common feature of legends and folklore from ancient times in virtually every culture of the world.”

--Carol Rose, Giants, Monsters & Dragons, W.W. Norton & Company, 2001, pg. xxv
The pervasiveness of dragon myths in the folk legends of many cultures is probably no accident....It is a worldwide phenomenon.

The R-complex is functioning in the dreams of humans; the dragons can be heard, hissing and rasping, and the dinosaurs thunder still.

...we may each of us be replaying the hundred-million-year-old warfare between reptiles and the mammals.

“Ethiopia produces dragons, not so large as those of India, but still, twenty cubits in length.”

“The contest is equally fatal to both; the elephant, vanquished, falls to the earth, and by its weight, crushes the dragon which is entwined around it.”
